

# 2020 Arizona Youth Survey

## Frequently Asked Questions

During the 2019-2020 school year the Arizona Criminal Justice Commission, on behalf of the State of Arizona, will conduct a survey of 8<sup>th</sup>, 10<sup>th</sup>, and 12<sup>th</sup> grade students to gather information needed to monitor underage drinking, drug use, and problem behaviors. Data collected from the Arizona Youth Survey assists with the planning and monitoring of prevention and intervention programming in our schools and communities.

### What is the focus of the 2020 Arizona Youth Survey?

The Arizona Youth Survey is based on the Communities that Care (CTC) survey, which was developed by a team of researchers at the University of Washington. The focus of this survey is to better understand the prevalence and frequency of problematic youth behaviors – such as substance use, gang involvement, and the risk and protective factors that are correlated with those behaviors.

### What kinds of questions are asked?

The survey includes questions related to alcohol, tobacco, and other drug use, problematic behaviors, and related risk and protective factors. Collecting this information directly from youth provides us with measures of these behaviors that are not available from any other data source.

### Why should my school participate?

The Arizona Youth Survey gathers information on the individual and environmental factors that are affecting your students. These data will allow you to better understand the needs of your students, can inform risk and protective factor prevention planning, and assess whether these approaches lead to better outcomes, such as reductions in substance abuse, problematic behaviors, and improved academic outcomes.

Your school will be provided with a summary report containing your school's data, along with statewide results for comparison. If your school participated in the 2016 or 2018 Arizona Youth Survey, the report will include data allowing you to track trends over time. This information is provided at no cost to your school or school district.

### Are any other schools participating in this survey?

Yes, schools from around the state are expected to participate in the survey. In 2018, 246 schools statewide participated in the Arizona Youth Survey. Some of those schools were recruited to provide a comprehensive assessment of the entire state, while others had previously participated and wished to continue their participation.

## **What will my school be asked to do?**

The survey is designed to be administered in a school classroom setting by the class teacher. The school will be provided with all necessary materials for completing the survey, including teacher instructions for administering the survey and a written script that will be read to the students at the beginning of the class that explains the purpose and voluntary nature of the Arizona Youth Survey. Also, we will provide your school with a standard letter that is to be used to notify parents of the survey and a form that allows parents to request that their child not participate in the survey. This letter should be sent home with students in the 8<sup>th</sup>, 10<sup>th</sup>, and 12<sup>th</sup> grades prior to the date of administration.

## **What if a student does not wish to participate?**

Students' participation in the Arizona Youth Survey is completely voluntary. At the beginning of the class period when the survey will be administered, the teacher will read a prepared statement that informs the students that their participation is voluntary. They are given the option to decline participation and are advised that they may skip any question that they do not want to answer. We recommend that any student who declines to participate in the survey be provided with an alternate activity to do while the survey is being administered.

## **Is student participation anonymous?**

Yes, completely. Each student will be given a survey booklet that contains the questions and a place for recording responses. The survey booklet will not have a place for students to enter their name, or any other personally identifying information. Before they begin, students will be reminded that they should not write their name or other identifying information on the booklet. When completing the survey, students should also be arranged in the classroom so that their responses cannot be seen by the teacher administering the survey or by any of the student's peers. At the end of the class period, the survey booklets are placed in a sealed envelope by each student.

Student participation is also anonymous if your school chooses to administer the survey online. The survey is taken through the platform Qualtrics, and does not require any identifying information to start or complete the survey. Students are also given the option to skip any question in the online format that they do not wish to answer.

## **What will my students be asked to do?**

The students will be asked to complete a self-administered survey questionnaire during one class period at school. The student will be asked to read each question and select a response from a list of pre-identified responses.

## **How long does it take to complete the survey?**

The survey will take most students the full class period to complete. Although it is expected that the students will have sufficient time to complete the entire survey, they will be informed that they should answer as many questions as possible during the class period but not be concerned if they are unable to finish all of them. We recommend that students who finish before the end of the class period be asked to work quietly at their desks while their classmates finish.

## **Is the survey available online?**

The survey is available for schools to administer either through a paper version, or through an online survey tool, whichever is most convenient for the school. The survey will be available online using the survey tool, Qualtrics.

Those schools choosing to administer the survey online will receive a URL address one - two weeks prior to their administration and all students will use this address to access the survey.

### **When will the survey be conducted?**

The survey will be available for administration between February and May, 2020. Within a given school, the survey should be administered to all participating grades during the same day. This will help prevent students discussing the questions with classmates who have not yet completed the survey.

### **How is the survey coordinated at each school?**

Schools should identify one individual who will be responsible for coordinating all of the surveys at your school. This person might be the Safe and Drug-Free Schools Coordinator, or some other staff member. This person will also serve as the primary contact for teachers' questions and will distribute teacher instruction documents.

### **Will the results be made available to my school?**

Yes. The principal or identified designee of each participating school will receive a school-specific report that contains a summary of data collected from the school's students. Reports published by the Arizona Criminal Justice Commission will be limited to state and county level information and will not identify any of the schools that participated.

### **How will this information be used?**

Information from the 2020 student survey can be used to meet a variety of needs at the school, community, city, county, and state levels.

- ▶ The survey provides information that can be used to identify the nature and extent of various problem behaviors. This information can be used to inform resource and policy decisions, such as where prevention and intervention efforts are most needed.
- ▶ At the state and federal levels, there are a variety of competing interests for limited prevention and intervention resources. Data obtained through this survey have been successfully used to provide evidence for additional resources addressing a variety of problem behaviors.
- ▶ Survey data can be used for both entitlement and competitive grant processes for schools and communities.
- ▶ Aggregated information collected from this survey can also be used by organizations across the state for competitive funding opportunities.
- ▶ With continuing participation, the information collected from this survey can be used to assess the performance of prevention and intervention efforts, as well as changes over time in the factors that affect the healthy development of Arizona's youth.
